SUMMARY

Software Engineer specialising in AI and automation, working at the intersection of intelligent systems and operational engineering. Currently building AI-driven automation pipelines and e-commerce infrastructure at Verge Scales - on the team through its revenue scale from 5-figure to 8-figure. Combines a top-1% CSE academic record, now continued in a B.Tech at VNR VJIET, with hands-on systems work - from React frontends to a from-scratch Go LSM database and an in-progress custom OS.

EXPERIENCE

Software Engineer – AI & Automation

Jan 2026 - Present

Verge Scales

Remote · Hyderabad, IN

- Building internal automation pipelines for e-commerce and marketing workflows; n8n-first stack integrating across company tooling via webhooks and REST APIs.
- Owning logistics end-to-end - supplier coordination, inbound and outbound shipment tracking, fulfillment continuity.
- Front-line customer relations: direct support, issue triage and resolution, feedback loop into the product and ops teams.
- Designing reusable workflow components that cut recurring manual operations overhead.
- On the team through the company's revenue growth from **5-figure** to **8-figure** scale.

EDUCATION

VNR Vignana Jyothi Institute of Engineering and Technology (VNR VJIET)

2026 - Present

B.Tech in Computer Science and Engineering

Hyderabad, India

- Joined 2026; building core CS depth on top of the diploma foundation.

TRR College of Technology

2023 - Apr 2026

Polytechnic Diploma in Computer Science and Engineering

Hyderabad, India

- Final cumulative CGPA of **9.18 / 10.0**; ranked in the top 1% of the diploma cohort.
- A+ grades in core technical modules: Java Programming, Data Structures, RDBMS.

Delhi School of Excellence

2013 - 2023

10th - CBSE

Hyderabad, India

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, C / C++, C#, SQL, Bash

Frameworks & Runtimes: React, Next.js, Node.js, .NET, Three.js, Tailwind

Data: Supabase, PostgreSQL, RDBMS

Automation: n8n, Webhooks, API Integration, Workflow Design, E-commerce Ops

Tooling: Git, Linux, GitHub Actions, CI / CD, Agile Methodologies

Cloud: Vercel, Cloudflare, AWS, Docker, nginx

TECHNICAL PROJECTS

SolderDB | Systems · Local-First Database | Go, LSM Tree, Wails, SSE, Bloom Filter, CRC32C

2026

A local-first database with PocketBase / Supabase parity, built on a from-scratch Go LSM storage engine and shipped as a single Wails desktop executable. Wrote the complete LSM-tree engine in Go: WAL with CRC32C torn-tail recovery, memtable flush, SSTables, leveled compaction, bloom filters in front of disk reads. Added power-aware compaction that pauses background work on battery / thermal pressure. Wrapped the engine in a BaaS layer - collections with schemas and rules, bcrypt + HMAC-SHA256 auth, multipart blob storage, realtime via Server-Sent Events, REST CRUD endpoints, JS and Go SDKs, plus a Wails React control center with a live LSM memtable-flush visualizer.

PyroOS | Systems · Custom Operating System (In Progress) | Assembly, C, x86, QEMU

2026 -

Custom operating system built from the bootloader up: an x86 hobby OS with an assembly bootloader (boot.asm) transitioning the CPU from Real Mode to Protected Mode, setting up the Global Descriptor Table (GDT) and Interrupt Descriptor Table (IDT), and shipping a VGA text-mode driver, with a C kernel growing on top - developed and debugged entirely in QEMU. Goal: an OS small enough to understand end-to-end - every interrupt vector, every memory page, every scheduled task.

AlgoWizard | Full-Stack · Educational Platform | React, Next.js, TypeScript, Supabase

2025 - 2026

Engineered an educational ecosystem that turns abstract data structures and algorithms into interactive, real-time visualizations. Architected the backend on Supabase for secure auth and persistent per-user progress across modules. Optimized client-side rendering so heavy algorithmic simulations stay smooth at high step counts, providing a high-performance environment for technical mastery.

Coefficient | Frontend · Logic Simulator | Next.js, React, SSR

2025 - 2026

High-performance frontend tool simulating complex system logic and performance optimization techniques directly in the browser. Engineered reusable logic components handling sub-millisecond state transitions for logic-gate and architectural simulations. Leveraged Next.js SSR to significantly improve initial load speeds and SEO accessibility.

Personal Portfolio | Creative Engineering | Three.js, GLSL, GSAP, Next.js

2026

WebGL-driven portfolio built from scratch - exploded motherboard hero scene in Three.js with custom GLSL shaders for PCB traces, cursor-magnetic component physics, additive-blend particle systems, draggable card-stack project deck, text-built skills sphere, intro loader, smooth-scroll, keyboard shortcuts, optional sound system.

ACHIEVEMENTS & LEADERSHIP

- **(2026) Academic Excellence** - Ranked within the top 1% of the Computer Science and Engineering department across the full diploma program.
- **(2023 - 2026) Engineering Leadership** - Elected Class Representative for all three years of the diploma program. Primary liaison between the student body and faculty; organized technical class discussions and supported peers in academic navigation and technical tutoring.

LANGUAGES & INTERESTS

Languages: English (Native / Bilingual), Telugu (Native), Hindi (Proficient)

Interests: Performance Tuning, Open-Source Android Customization, Music, Films, Photography
